aws

Why Inspectivity's solutions?

inspectivity

Keep an Asset-centric view

How can you maintain inspection history to create a catalogued and accessible data set without taking an asset-centric view? Inspectivity understand this and designed a solution around the asset-centric concept. We ensure inspection history can be linked directly to an asset and maintained throughout its lifetime.

inspectivity

Provide a perfect home for asset condition data

How accessible is your asset condition engineering data? Inspection reports stored in your work order management solution are not easily accessible for comparison or analysis.

Inspectivity is asset-centric and works in harmony with other systems but more importantly provides the perfect home for asset condition data.

inspectivity

Simplify the solution landscape for all teams

Major capital projects are multi-phase, multi-discipline and multi-use case.

Each use case has niche requirements for efficiency but each works in its own way. Having their own project breakdown and ways of working. This creates data restricted in silos, incompatible between disciplines and project lifecycle phases and creating an inability to exchange, compare or reuse data. The full value of the data cannot be realised.

Inspectivity addresses these issues by providing a universal system for defining inspections and grouping assets through all stages of a project.

inspectivity

Assemble and learn from your data

Inspectivity allows stakeholders to create immersive, catalogued and connected inspection data sets. A combination of powerful form building capability and asset-centric concepts enable clients to build out comprehensive volumes of "strongly typed" data.

Inspectivity provides world-class technology to collect and organise inspection data and, critically, presents the opportunity for clients to monetise or "harness" their data.

Introducing The Inspectivity Platform

inspectivity

B2B SaaS Solution

The Inspectivity Platform

A no-code platform for the configuration and management of any asset-centric enterprise inspection use case. Combining modern web and mobile apps to connect global teams and supercharge inspection outcomes.

Portal Web Application

Portal allows key stakeholders to manage the lifecycle of any asset-centric inspection activity. Facilitating the capture of high-quality condition information whilst enabling global stakeholders to collaborate on and analyse the same data set regardless of location. Portal provides benefits that will transform your business.

Global SaaS Awards 2021:
Best SaaS Product for Energy & Utilities - Finalist

Go Mobile App

The Go app streamlines any field inspection task. Transforming productivity by removing pre-inspection planning tasks, placing all information at the inspector's fingertips and automating reporting. Digital inspection brings a disciplined approach allowing you to rely less on scarce senior resources and enforce competency for critical inspection scopes.

Asset Modelling

- Model a digital asset hierarchy:
 - System breakdown
 - Location breakdown
 - Work breakdown
- View asset data with real-time updates:
 - Asset Specification Data
 - Inspection history
 - Issues (Punch/Anomaly/Defect)
 - Linked to Lifecycle Documentation
 - Media (Photos, video, voice)
- Cradle to grave
 - Any project phase
 - Any project
 - Any discipline/work scope

Model by system, location
or work breakdown

Smart Forms

- Digitise any use case fast
- Configure intuitive layouts
- Use a range of input field types
- Add Validation rules
- Calculations and form automation
- Display reference images
- Configurable Issue Forms for follow up work
- Create simple checklists or more comprehensive forms

Quickly set up forms
for any use case

Collaborative

- Auditable and transparent workflow
- Support critical decision making with real-time data
- Better collaboration and oversight between project locations
- Clarifications, rework, reviews and reinspection
- Manage issue assessment and closeout
- Configurable alerts

Mobility

- Android
- Fast, accurate and reliable
- Online or offline
- Access lifecycle documentation
- Take / annotate photos
- View / annotate drawings
- Record issues
- Review full condition history
- QR / Bar code / RFID
- Geo-location
- Video and voice

Timely decision making for
critical issues

Reporting

- Monitor inspection progress with integrated dashboards
- Live-streamed notifications
- Create your own dashboards with integrated Business Intelligence tools
- Powerful Register screens:
 - Asset Register (“any dossier”)
 - Inspection Activity Register
 - Issues Register
 - Media Register
- PDF inspection and photo reports
- Completion certification
- Customised reporting

Transform,
analyse, visualise

System Integration

- REST API
- Seamless integration
- Maintain integrity across systems
- Integrate work order and inspection workflows
- Automate follow up work order management
- Remove all manual workflows between field inspection and systems

Connect systems
and field inspection

Fast and scalable
implementation

Support

Inspectivity provides comprehensive client support according to contractual SLAs. 24x7 monitoring of IT systems is in place, monitoring technical conditions like availability, memory, load and disk space. Platform instance availability is also monitored from various locations around the world (independent of our cloud infrastructure provider (AWS)).

Fast Set Up

By adopting Inspectivity's cloud solution you save substantial capital costs and client access is normally completed in less than 1 day.

Sandbox

Enterprise agreements also include a staging (test / non-operational) environment to allow clients to configure, trial and prepare for production use case deployments.

Prompt Support

Inspectivity support is extremely responsive as confirmed by our customer reviews. Various support channels are available such as an online service desk, email and phone.

Concierge Service

Enterprise agreements include a dedicated Account Manager. This provides a concierge-like service where the main focus is helping you onboard and find success with Inspectivity Platform software.

Future Proof Tech

Licensing costs include future versions, continuous improvements and new features. By listening to our client's digital vision and strategy we can develop sought after capabilities and enable for all clients.

Documentation

Our online knowledge base empowers all users to leverage the full "out of the box" configuration capabilities of The Inspectivity Platform

inspectivity

Implementation Assistance

Our focus is on the delivery of asset-centric digital inspection management in the energy, engineering, resources and asset management sectors. We understand the complexity of these projects, the likely data volumes and how this translates to software delivery.

Through our professional services, Inspectivity can assist clients to configure digital inspection use cases that follow best practices for our technology and allow clients to lay the foundation for an intuitive and scalable implementation.

- Best practice and guidance
- Use case implementation
- Hands on training
- Bespoke customisation
- Paid for features
- Integration

Our Values

Inspectivity company values underpin and drive strategy, they help the team to develop the right processes and ensure that day to day operations are streamlined.

Customer Commitment

Provide exceptionally good support and high software quality. We listen to our customers and add value to their operations.

Agility

Inspectivity is an agile company creating customer-centric solutions quickly and in response to market changes.

Deliver Value & Scale

We are entrepreneurial in our delivery of solutions, with a vision for a product evolution beyond a single discipline, use case or industry.

Integrity

Be consistently honest, ethical and genuine with our team members and external stakeholders

Inspectivity operates in compliance with ISO 27001:2015 and ISO 9001:2015 quality and information security management system standards.

Ease of access to information required to get work done is the #1 way in which technology can drive productivity.
